iCode
WORKFLOW™

iCode Workflow: Coding Platform

iCW™ (iCode Workflow™) is a single-platform solution that enhances the coding process with intelligent workflows and integrated NLP powered coding software for optimal quality assurance. Our iCW technology assimilates with all EHR systems directly to consolidate claim and clinical information inputs from each platform into a single and secure, cloud-based platform.

iCW provides robust, customizable reporting with embedded analytics and integrated coding quality assurance for insights into system-wide internal operations and organizational performance across industry benchmarks, toaccommodate the needs of all stakeholders.

Benefits of iCode Workflow

01 Consolidate disparate systems into one platform to access clinical, coding, and patient information and documents

02 Real-time analytical QA rules engine for coding, payor, and custom edits

03 Various quality control workflows to effectively improve accuracy

04 Reduce lag-times with workflow modules that appropriately allocate workloads and assigns prioritization

05 Customized dashboards to monitor all aspects of production volumes, service levels, and workflow adherence

06 Efficiently manage and report coder productivity, TATs, status, and KPIs

07 Exception management with embedded workflow to offer full visibility

08 Single platform combines all hospital, physician, place of service, and specialty services

09 Accepts various forms of input (including HL7, DOC, DOCX, CSV, PDF, and TIFF-scanned paper reports

10 Secure, cloud-based solution – access anywhere, anytime
