

# Agentic AI for Revenue Cycle Management

Execute Across the Entire Revenue Cycle

GeBBS Agentic AI combines coordinated AI agents with RCM expertise to execute workflows across eligibility, coding, billing, denials, payment reconciliation, and revenue intelligence.

## Key Features:

### Eligibility & Prior Authorization

Validate coverage and auth requirements

### Coding & Documentation

Review documentation and support coding

### Denial Prevention

Check payer rules pre-submission

### Denial Management & Appeals

Analyze denials and support appeals

### Payment Reconciliation

Detect underpayments and variances

### Revenue Intelligence

Track performance in real time

## Benefits:

- 01 Reduce Manual Workload**
  - Automates high-volume RCM tasks
  - Enables exception-based staff oversight
- 02 Prevent Revenue Leakage**
  - Identifies errors before submission
  - Reduces avoidable denials and rework
- 03 Accelerate Cash Flow**
  - Speeds claim validation and submission
  - Improves reimbursement cycle efficiency
- 04 Scale Without Adding Headcount**
  - Coordinates AI agents across workflows
  - Supports enterprise RCM complexity
- 05 Improve Financial Visibility**
  - Provides real-time revenue intelligence
  - Surfaces denial trends and payment risks

## Real Results\*

**30%+** Fewer Denials

**30-50%** Less Manual Work

**30%** Faster Claim Submission

**25%** Higher Clean Claim Rate

\*Results may vary

Move beyond automation with Agentic AI built to detect, decide, and act across the revenue cycle.
